

PAVAN TINNAVALLI

DATA ANALYST

Detail-oriented Data Analyst with a strong foundation in Python, SQL, and Power BI. Passionate about transforming complex datasets into actionable business strategies.

pavanthinnavalliciet@gmail.com +91 8919493844

CORE COMPETENCIES

- Data Analysis & Visualization
- ETL Pipeline Development
- SQL & Database Management
- Python Programming
- Business Intelligence
- Customer Segmentation
- Statistical Analysis
- Dashboard Design
- Churn & Retention Analysis
- Agile Methodologies

TECHNICAL SKILLS

- Languages:** Python, SQL
- Developer Tools:** VS Code, GitHub, Power BI
- Libraries:** Pandas, NumPy, Seaborn, SQLAlchemy
- Database:** PostgreSQL

EDUCATION

2019 – 2023: B.Tech in Civil Engineering from Acharya Nagarjuna University, Guntur, AP

PERSONAL DETAILS

DOB: 24-Apr-2002
Gender: Male
Marital Status: Single
Location: Thullur, Guntur, AP 522237

PROFILE SUMMARY

- Detail-oriented Data Analyst with a background in Civil Engineering and a strong foundation in Python, SQL, and Power BI.
- Proven ability to build end-to-end data pipelines, from ETL and database management to executive-level visualization.
- Currently working at Wipro as a Content Moderator (Ad Operations), applying data integrity and quality assurance skills in a high-volume MNC environment.
- Experienced in conducting exploratory data analysis, customer segmentation, and RFM modeling on large datasets.
- Skilled in designing advanced SQL queries using CTEs and window functions to derive actionable business insights.
- Proficient in building interactive Power BI dashboards presenting executive-level KPIs and growth recommendations.
- Passionate about transforming complex datasets into actionable business strategies that drive measurable outcomes.

WORK EXPERIENCE

Google Ads (Wipro) Content Moderator – Ad Operations

Wipro, Hyderabad
February 2026 – Present

- Conducted quality assurance audits on Google Ads to ensure strict adherence to global advertising policies and brand safety standards.
- Analyzed ad metadata and performance trends in a high-volume MNC environment to maintain platform data integrity and accuracy.

PROJECTS

Consumer Behavior & Sales Optimization

January 2026

Python, SQL, Power BI

- Conducted comprehensive exploratory data analysis on 3,900+ retail transactions to identify purchasing trends, revenue concentration, and customer behavior patterns.
- Cleaned and transformed structured transactional data using Pandas, handling missing values through median imputation to preserve distribution integrity.
- Performed statistical summaries and distribution analysis to detect outliers and validate business assumptions before segmentation.
- Designed advanced SQL queries using CTEs and window functions to segment customers into lifecycle stages (New, Returning, Loyal).
- Calculated customer-level KPIs including Average Order Value (AOV), purchase frequency, and revenue share to evaluate profitability.
- Identified key growth drivers: subscription users generated 45% higher revenue; Express Shipping customers showed 12% higher spending.
- Analyzed demographic revenue contribution, discovering Young Adult customers accounted for \$62K in total sales.
- Developed an interactive Power BI dashboard presenting executive-level KPIs, segment comparisons, and actionable growth recommendations.

Olist E-Commerce Retention Pipeline

February 2026

Python, SQL, Power BI

- Built an automated ETL pipeline to extract, clean, and load 100,000+ customer transaction records into PostgreSQL for churn and retention analysis.
- Engineered RFM (Recency, Frequency, Monetary) metrics using SQL aggregation and Python-based feature transformation to classify customers into loyalty tiers.
- Designed a heuristic churn risk scoring model based on inactivity thresholds and behavioral scoring to identify high-risk, high-value customers.
- Quantified 'Revenue at Risk' by calculating cumulative revenue contribution of churn-prone segments, highlighting 90% exposure within premium-tier customers.
- Applied window functions and ranking logic to prioritize retention-critical accounts based on revenue impact.
- Evaluated customer concentration risk by analyzing revenue distribution across loyalty tiers and identifying dependency on top segments.

- Conducted trend analysis on customer inactivity patterns to detect early warning signals for churn risk escalation.
- Developed a dynamic Power BI dashboard providing leadership with real-time visibility into retention metrics, revenue vulnerability, and re-engagement prioritization.

DECLARATION

I hereby declare that the information given above is correct to the best of my knowledge.
